Shore Insulation is experienced and no job is too big. We take the same care and pride in our workmanship as we do when we insulate our own mother's house.

We use blown-in cellulose insulation composed of at least 85 percent recycled fibers. Unlike traditional insulation, it is not manufactured with any formaldehyde, asbestos, mineral fiber, or fiberglass. The density of Cellulose insulation gives it a high R-value per inch, which it maintains even under extreme conditions. You cannot find better insulation. The insulation also achieves such great overall energy efficiency because it is blown into tiny cavities and also surrounds plumbing pipes and electrical wiring. Thus, it seals gaps where energy can escape and reduces any air infiltration.

Shore Insulation has worked with Property Owners and Managers, as well as infrared photography technicians and the Association for Better Insulation to provide you with quantifiable returns on your insulation and energy efficiency upgrade investments.

Contact us for more information or to schedule a comprehensive energy efficiency upgrade program for your properties. We work closely with Owners and Managers to bring your properties up to US Department of Energy Recommended Insulation Values in a time frame that fits your energy efficiency budgets and goals.

SOUNDPROOFING - THERMAL INSULATION
CRAWLSPACES - FIREPROOFING SERVICES
BOILER AND STEAM PIPE INSULATION
IMPROVED ENERGY EFFICIENCY = LESS OPERATING COSTS
